

Certification of Environmental Management Systems

Environmental Management Systems

An environmental management system is that part of the overall management system which comprises organizational structures, planning activities, division of responsibilities, practices, procedures, methods and resources for developing, introducing, achieving, reviewing and maintaining environmental policies.

Environmental management systems that comply with the requirements of the international ISO 14001 standard may be certified in accordance with internationally recognized guidelines.

Its value

In principle, every type of company will benefit from an environmental management system which contributes to:

- An improved image and a positive market impact
- The timely satisfaction of environmental requirements
- Boosting environmental awareness among staff
- Financial savings through efficient exploitation of resources
- Improved financing opportunities
- Reducing risk with the consequent reduction in insurance costs.

The goals are:

- Improved utilization of resources with the consequent reduction in costs
- Prevention of defects and deficiencies
- Enhanced customer satisfaction.

Competence

Our auditors are selected experts in FORCE Technology and comply with strict qualification and impartiality requirements. These qualifications contribute to making the company's environmental management system more efficient, and they satisfy requirements for efficient progress towards achieving the above goals.

The high professional level and the impartiality of the auditors is constantly monitored by DANAK.

FORCE Certification A/S is accredited by DANAK for the certification of company environmental management systems in accordance with ISO 14001.

FORCE Certification A/S is FORCE Technology's independent certifying body.

Besides the certification of environmental management systems, FORCE Certification A/S also provides certification of people, products and system, and in these areas is accredited by DANAK under Reg. Nos. 3001, 7008 and 5008.

Background

At both national and international levels environmental consciousness has become one of the most important competitive parameters for any company.

Increased awareness on the part of customers, authorities and investors has made environmental management a prerequisite for meeting the requirements of the future market.
