

Certification of Quality Management Systems

Quality Management Systems

A quality management system is an important strategic aspect of the management system used by senior management in directing their companies.

The design and application of the company's quality management system depends on the company's products/services, the processes involved in their production and the size and structure of the company.

Quality management systems that comply with the relevant requirements of the international ISO 9001 standard may be certified in accordance with internationally recognized guidelines.

FORCE Certification A/S is accredited by DANAK for the certification of company quality management systems in accordance with ISO 9001.

Its value

A certified quality management system not only provides direct benefits in day-to-day quality control but also makes an important contribution to managing costs and risk.

The quality management system may affect:

- Operating results, such as e.g. earnings and market shares
- Flexible and rapid reaction times to market opportunities
- The grouping of processes in a manner that will provide the best results
- Stakeholder confidence in the efficiency of the company
- The capacity to create value for the company and its suppliers
- Customer loyalty, re-orders and recommendations.

The goals are:

- Improved utilization of resources with the consequent reduction in costs
- Prevention of defects and deficiencies
- Enhanced customer satisfaction.

**Competence**

FORCE Certification A/S's auditors are selected experts in FORCE Technology and comply with strict qualification and impartiality requirements.

These qualifications contribute to the company's quality management system being assessed in accordance with the above goals, thus satisfying the management's desire for the system to contribute to an improvement in the overall performance and capabilities of the company.

The high professional level of certification and the impartiality of the auditors is constantly monitored by DANAK.

FORCE Certification A/S is FORCE Technology's independent certifying body.

Besides the certification of quality management systems, FORCE Certification A/S also provides certification of environmental management systems, people and products, and in these areas is accredited by DANAK under Reg. Nos. 6005, 3001 and 7008.

Background

At both national and international levels, quality management is recognized as being an important part of the company profile.

Customers often require documentation of the quality control of products and services.
