

Ship Handling Courseware

Navigation at Management Level

Supports Dual Screen configuration, which is an appropriate option while running exercise simulations

The Ship Handling Courseware provides material for attaining the competences stipulated in STCW '95 Code "Navigation at Management Level", section A-II/2.

Contents

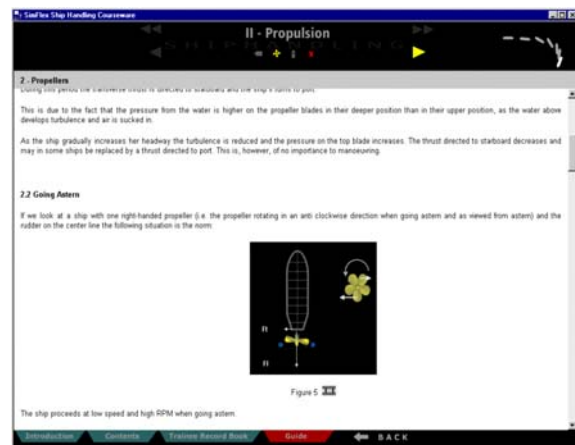

A large number of manoeuvring simulations featuring SimFlex Navigator is attached and employs the knowledge and understanding of the contained theory by means of hands-on trials.

Animated illustrations simplify the learning process and ease the realisation of self-study. Personal logging and an instantly updated progress bar as well as the Trainee Record Book - only shared with dedicated instructors - ease individual scheduling.

Water-flow phenomena for different rudder and propeller types are some of numerous animated illustrations embedded in all of FORCE Technology's courseware products

Features

- Manoeuvring simulation exercises employing the knowledge and understanding of the theory.
- Personal Trainee Record Book to browse or print.
- Remote assessment from networked PC or Internet.
- Supports Dual Screen configuration and real manoeuvring handles.

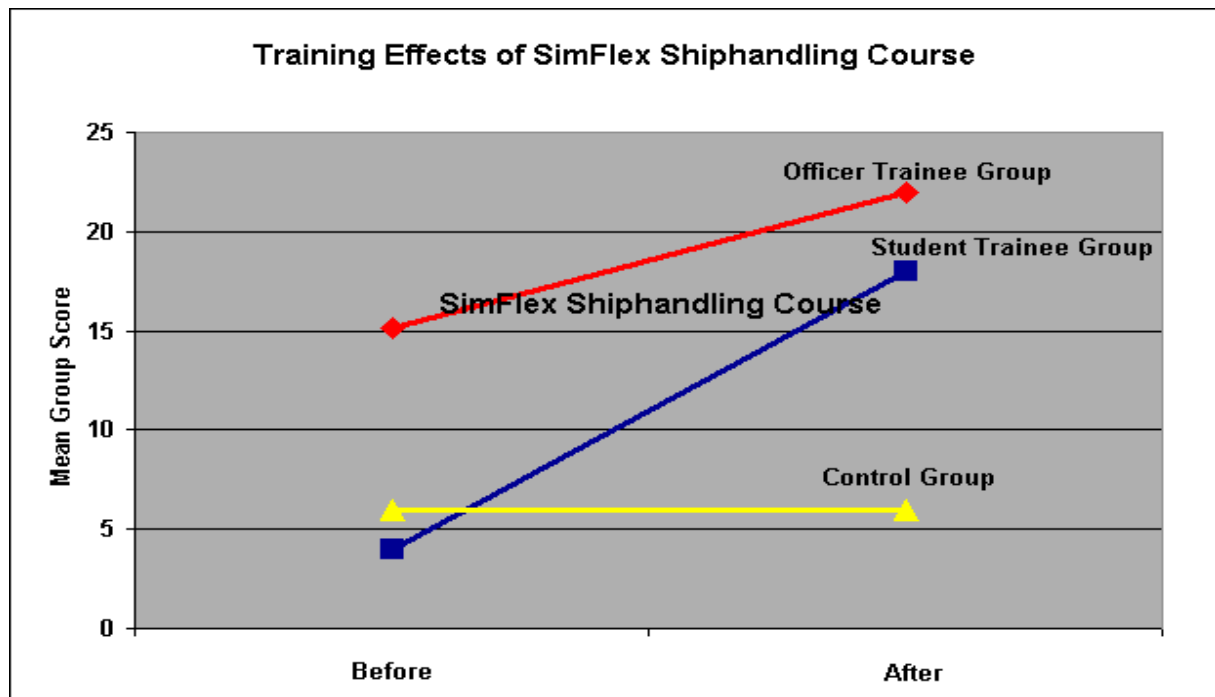

With the built-in replay system a student's performance can be reviewed at a glance and assessed by the student or remotely by an instructor. The Trainee Record Book collects all results.

Evaluation

Courtesy of MAERSK and Svendborg Navigation School, a test with a group of officers and a group of students participating, on board a vessel as well as on shore, has proved that this courseware gain training effect significantly, even with a distant instructor.

Students are only seeing own results while instructors at any time have access to review and assess a whole class by using the Trainee Record Book.
